|-----------|-----|
| Trust     | 30% |
| Content   | 80% |
| Technical | 75% |

WHAT THIS MEANS FOR YOU

AI visibility is currently low: the site presents useful product messaging but lacks verifiable evidence and trust signals that model-based systems use to surface authoritative answers. The single biggest issue is the absence of third-party evidence or published artifacts for quantitative, security, and SLA claims. AI indexing also depends on structured discoverability signals (different from Google ranking signals); the first finding addresses the lack of verifiable evidence and citations because fixing it will yield the largest immediate trust and retrieval gains.

FINDINGS & FIXES, IN THE ORDER TO TACKLE THEM

## 01 Key product and security claims lack verifiable evidence or citations

**HIGH EVIDENCE**

AI systems and users rely on verifiable artifacts to trust and cite factual claims.

[HTTPS://ZENACT.AI/](https://zenact.ai/) – HOMEPAGE FAQ ('HOW QUICKLY CAN I GET STARTED?')

Claim: 'Most early adopters build and automate up to 5 tests within their first 2 hours.'

→ should be: No logs, case study, benchmark, or dataset linked to substantiate this numeric onboarding claim.

[HTTPS://ZENACT.AI/](https://zenact.ai/) – HOMEPAGE FAQ / PRIVACY POLICY

Claim: 'All data is end-to-end encrypted, and we're currently undergoing SOC 2 certification.'

→ should be: No SOC 2 attestation, encryption design document, or SLA PDF is linked to validate security assertions.

---

### FIX IT

1) Publish short, linked case studies or anonymized onboarding metrics for the '5 tests in 2 hours' claim; 2) Post a security package (SOC 2 attestation or readiness summary, encryption whitepaper, and a public SLA PDF); 3) Link benchmark reports or sample test runs that show device coverage and concurrency limits.

## 02 No llms.txt at site root to indicate model-facing assets

MEDIUM

TECHNICAL

llms.txt is a simple discoverability signal many model indexers check to find model-facing pages and rules.

```
/LLMS.TXT (SITE ROOT)
```

```
llms.txt file not found at site root
```

→ should be: Absence of llms.txt reduces model-facing discoverability for AI crawlers.

### FIX IT

1) Add a /llms.txt file at the site root; 2) Include links to your sitemap and any model-facing rules or exclusions; 3) Serve it from the root with 200 status and a short README-style format.

## 03 Pages lack explicit published/last-updated timestamps in page metadata

MEDIUM

FRESHNESS

AI systems use explicit timestamps to assess currency and prefer dated content when answering time-sensitive queries.

```
HTTPS://ZENACT.AI/ - PAGE TEMPORAL METADATA
```

```
published: null, modified: null despite recent HTTP Last-Modified header
```

→ should be: On-page structured timestamps are missing even though server updates are recent.

### FIX IT

1) Add visible 'published' and 'last updated' timestamps on pages and in structured metadata (schema.org/WebPage or Article); 2) For time-sensitive claims (e.g., SOC 2) add a dated status or link to a compliance status page; 3) Update timestamps when content changes.

04

## Security and SLA assertions lack third-party attestation and a status page

HIGH

CITATION

AI and enterprise buyers prefer authoritative links (audits, SLA PDFs, status pages) to trust security and availability claims.

[HTTPS://ZENACT.AI/](https://zenact.ai/) – HOMEPAGE FAQ ('IS MY DATA SECURE?')

Claim: 'All data is end-to-end encrypted, and we're currently undergoing SOC 2 certification.'

→ should be: No auditor name, SOC 2 type, or downloadable attestation is provided.

[HTTPS://ZENACT.AI/ZENACT-PRICING](https://zenact.ai/zenact-pricing) – PRICING FAQ

Claim: '24/7 support, and 99% uptime SLA'.

→ should be: No SLA document or public uptime/status page linked to validate the uptime commitment.

---

### FIX IT

1) Publish an SOC 2 attestation or a readiness summary with auditor and expected timeline; 2) Upload a public SLA document (definitions, credits, historical uptime) and create a status page; 3) Link these artifacts prominently from FAQ, privacy, and pricing pages.

## 05 Feature headings (e.g., 'Self-Healing Tests') lack explanatory content

MEDIUM

READABILITY

LLMs extract facts from nearby explanatory text, not isolated headings, so unlabeled headings reduce machine-readability.

[HTTPS://ZENACT.AI/](https://zenact.ai/) – HOMEPAGE HEADINGS (LEVEL 3)

Heading 'Self-Healing Tests' appears without a supporting paragraph or bullet list.

→ should be: No concise description means models cannot reliably explain the feature's scope or limits.

### FIX IT

1) Add a 2–3 sentence description or 3–5 bullet list under each feature heading; 2) Mark testimonials as quotes and include attribution where possible; 3) Ensure FAQ question headings are immediately followed by their answer blocks.

## 06 Limited technical integration documentation for CI/test frameworks and SDKs

MEDIUM

ENTITY

AI systems and engineers need explicit integration docs to answer technical how-to queries and generate reliable snippets.

[HTTPS://ZENACT.AI/](https://zenact.ai/) – FAQ / HOMEPAGE

Mentions Slack and GitHub Actions but no detailed integrations with Jenkins, CircleCI, Appium, Espresso, or SDK/API references.

→ should be: No integration docs, compatibility matrix, or sample pipeline snippets are provided.

### FIX IT

1) Publish a technical integrations page listing supported CI providers, test frameworks, and SDKs; 2) Add sample CI YAML/snippets and API/SDK references; 3) Provide a compatibility matrix showing device/OS coverage and concurrency limits.

## 07 Pricing page displays numeric artifacts but lacks concrete pricing examples

MEDIUM

FAQ

AI systems and buyers cannot compute ROI or answer pricing questions without example tiers or unit definitions.

HTTPS://ZENACT.AI/ZENACT-PRICING — PRICING PAGE BODY

Numeric blocks such as '10 10 10 10 120 \$9k 3x' and 'ROI calculator' appear with no labels or explanation.

→ should be: No sample tiers, per-unit pricing, or ROI input/output details are provided publicly.

### FIX IT

1) Publish example pricing tiers or a sample cost-per-test/device-hour; 2) Release the ROI calculator inputs/outputs or an illustrative example; 3) Link sample invoices or pricing FAQs for common company sizes.

## 08 Several pages do not specify canonical URLs

LOW

TECHNICAL

Canonicals help automated systems identify the definitive version of content and avoid duplicate answers.

TECHNICAL SCAN SUMMARY

0/7 pages specify a canonical URL (7 pages missing canonical tags).

→ should be: Missing rel=canonical tags can create duplicate-content ambiguity for crawlers and models.

### FIX IT

1) Add a rel="canonical" link element to each page pointing to the preferred URL; 2) Ensure canonical URLs use the final production URL (no query strings) and match sitemap entries.

```
<link rel="canonical" href="https://zenact.ai/THIS-PAGE" />
```
